

February 14, 1979

Mr. William T. Nunn
3419 South Elmview
Springfield, Missouri 65804

Dear Mr. Nunn:

On February 5, 1979, this office received a complaint about a pollutant discharge resembling laundry waste coming from a residence at 3037 Beaumont. Personnel from the City's Water Pollution Control Section made a visual inspection of this property and found a pipe surfacing in the driveway and the wastewater running down the driveway into the street. After talking to the resident, it was found that the discharge was laundry waste and that the residence in question is under your ownership.

After inspection, it was assumed that the drain pipe running down the drive and into the street is not attached to a septic tank or an approved treatment system. The practice of discharging uncontaminated storm water or ground water such as basement sump pumps and roof drains is perfectly acceptable. However, please be advised that the discharge of pollutants is in violation of City, State, and Federal Water Pollution Control Laws, and a violation of City Health Ordinances, and must be abated immediately.

If this office can be of service to you in answering any questions, please do not hesitate to call.

Yours truly,

J. D. Slaughter
Water Pollution Control Inspector II
Surveillance and Enforcement
